### Cuando podemos usar mongo?

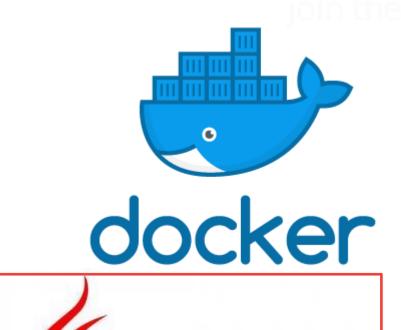

### Como elegir entre NoSql y SQL

	NoSQL o no relacional	SQL o relacional
LA MEJOR OPCIÓN PARA:	<ul> <li>Administrar datos de gran volumen, no relacionados, indeterminados o que cambian rápidamente.</li> <li>Datos independientes del esquema o esquema dictados por la aplicación.</li> <li>Aplicaciones en las que el rendimiento y la disponibilidad son más importantes que una coherencia alta.</li> <li>Aplicaciones siempre activas que dan servicios a usuarios de todo el mundo.</li> </ul>	<ul> <li>Administrar datos relacionales con requisitos lógicos y discretos que se puedan identificar con antelación.</li> <li>Esquema que se debe mantener sincronizado entre la aplicación y la base de datos.</li> <li>Sistemas heredados creados para estructuras relacionales.</li> <li>Aplicaciones que requieren transacciones de varias filas o consultas complejas.</li> </ul>
ESCENARIOS:	<ul> <li>Aplicaciones móviles.</li> <li>Análisis en tiempo real.</li> <li>Administración de contenido.</li> <li>Personalización.</li> <li>Aplicaciones de IoT.</li> <li>Migración de bases de datos.</li> </ul>	<ul> <li>Sistemas de contabilidad, finanzas y bancarios.</li> <li>Sistemas de administración de inventario.</li> <li>Sistemas de administración de transacciones.</li> </ul>
ESCALADO:	<ul> <li>Escala los datos horizontalmente mediante el particionamiento entre los servidores.</li> </ul>	Escala los datos verticalmente al aumentar la carga del servidor.
MODELO DE DATOS:	<ul> <li>Tipos de base de datos: bases de datos de pares clave-valor, documentos, en columnas y de grafos.</li> <li>Almacena los datos en función del tipo de base de datos.</li> </ul>	<ul> <li>Tipo de base de datos: tablas de filas, agrupadas en relaciones.</li> <li>Usa el Lenguaje de consulta estructurado (SQL).</li> <li>Almacena datos como filas en tablas; datos relacionados almacenados por separado y unidos para consultas complejas.</li> </ul>

# Best Databases NoSql

### MongoDB

It is an open-source NoSQL database that is document-oriented. MongoDB uses JSON like documents to store any data. It is written in C++.

#### Cassandra

It was developed at Facebook for an inbox search. Cassandra is a distributed data storage system for handling very large amounts of structured data.

#### Redis

Redis is the most famous key-value store. Redis is composed in C language. It is authorized under BSD.

#### **HBase**

It is a distributed and non-relational database that is designed for the BigTable database by Google.

### Neo4j

Neo4j is referred to as a native graph database because it effectively implements the property graph model down to the storage level.

#### RavenDB

RavenDB is the original NoSQL Document Database to offer fully transactional (ACID) data integrity across multiple documents of your database and throughout your entire database cluster.

### Oracle NoSQL

Oracle NoSQL Database implements a map from user-defined keys to opaque data items.

### Amazon DynamoDB

DynamoDB uses a NoSQL database model, which is nonrelational, allowing documents, graphs and columnar among its data models.

#### Couchbase

Couchbase Server is a NoSQL document database for interactive web applications. It has a flexible data model, is easily scalable, provides consistently high performance.

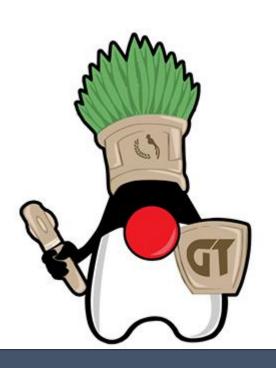

#### Memcached

It is an open-source, high-performance, distributed memory caching system intended to speed up dynamic web applications by reducing the database load.

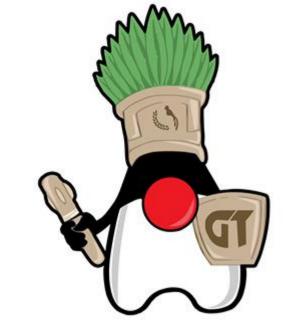

### CouchDB

It is an Open Source NoSQL Database which utilizes JSON to store information and JavaScript as its query language.

# GRACIASI

## THANK YOU
